# Decarbonization update

## Revised IMO Greenhouse Gas (GHG) Strategy:

- Tank-to-wake  Well-to-wake
- 2030: Reduce GHG emissions by at least 20%
  - 40% carbon intensity reduction
  - 5% uptake net-zero technologies, fuel and/or energy savings
- 2040: Reduce GHG emissions by 70%
- **2050: Net-zero GHG emissions**

# How?

- Adopted regulation:
  - Carbon Intensity Indicator / enhanced SEEMP – annual reduction targets for operational emissions (mandatory from 2023)
- Agreement in principle:
  - New GHG intensity fuel standard
  - Possible price on GHG emissions; both for adoption 2025, into force 2027
- LCA guidelines  
Life cycle GHG intensity of marine fuels – technical only, no link to regulation (yet)
